

Aurora Energy marks contribution to north coast Labrador

Dear Community Member

Aurora has been conducting exploration in Labrador's Central Mineral Belt region since 2004 and during that time we've worked hard to make a positive contribution through local employment, contracting, training, and community investment.

The Aurora team is proud of the contribution it has made to north coast Labrador and I wanted to share with you an update on our commitment

Consultation is key to our community outreach efforts. Here, Aurora's Labrador Community Relations Advisor, Waylon Williams, talks with visitors at one of our open-house sessions in Makkovik, December 2007.

to the community and in carrying out our work using the best environmental and safety practices.

More than \$50 million has been spent to date on exploration programs and environmental baseline studies, with more than \$25 million staying in the Labrador economy. In 2007, Aurora's work program employed 275 people, of which 112 people were from north coast communities and the Happy Valley-Goose Bay area. Additionally, Aurora uses local companies for most goods and services required to support the exploration programs.

We purchase and recruit locally wherever possible because the expertise we have been able to source in Labrador is some of the finest in the industry. It makes sense for us to keep our business and employment focus close to home.

Active participation in the community, concern for the safety of our employees and the public, and environmental stewardship are core principles guiding how Aurora conducts its business.

We are hopeful we can continue our work activities in Labrador and to make further substantial and meaningful contributions to the community.

Mark O'Dea
President & CEO
Aurora Energy Resources Inc.

The following summary provides an overview of Aurora's contribution to north coast Labrador

Health and Safety

- Developed *Exploration Health, Safety and Environmental Protection Guidelines* for employees and contractors when handling radioactive material to minimize personal and environmental radiation exposure.
- Implemented policy where all employees must wear Thermoluminescent Dosimetry Badges (TLDs) to monitor and limit employee exposure to radiation.
- Developed comprehensive Radiation Safety training programs for employees and contractors.
- Provided radiation safety training to local community representatives including the Nunatsiavut Government and Innu Nation.

Community

- Established community liaison offices in Happy Valley-Goose Bay, Postville, and Makkovik staffed with community outreach personnel.

Performers on the set of the 'Borrowed Black Shadow Puppet Show', September 2007.

Old 45-gallon oil drums left near the Michelin Project area by previous operators.

Same site, after Aurora's clean-up team completed waste removal, October 2007.

- Completed a voluntarily cleanup campaign focused on removing historical exploration debris, which included stored garbage, wood, 45-gallon oil drums, and various metals (old tins and tools) that remained near the Michelin Project area since previous operators left the region in the 1980s. Local communities have been looking to have the debris removed since that time. The cleanup was a result of ongoing consultation with local communities and governments.
- Played a key role in helping a local start-up venture with the Labrador Inuit Development Corporation (LIDC). When Aurora guaranteed Postmill Lumber a contract to build 4,000 core boxes (boxes are used to store drill core), LIDC agreed to purchase the necessary equipment. Postmill Lumber went on to secure an additional contract with Voisey's Bay Nickel Company.

Postville student, Trevor Lane, offers seal meat to a fellow participant of the 'Students on Ice 2007 Arctic Expedition', August 2007.

- Donated funds in support of a variety of worthy local causes with a focus on making meaningful contributions to communities. Education and training (especially in environmental areas), non-profit charities, community and cultural initiatives, youth-focused programs, and sports are amongst the highest priorities.
- Significant sponsor of the Kids Eat Smart Program which helps provide healthy meals to students in the north coast schools.
- Extended community sponsorship scope to include not just communities nearest our operations such as Postville and Makkovik, but also other north coast communities from Nain to North West River. A sample of community sponsorships include Christmas hampers for north coast families, Trout Festival in Makkovik, Hopedale Annual Dog Sled Race, Nain Music Festival, and Guy Fawkes Night in North West River.

- Funded Postville high school student Trevor Lane to participate in the Students on Ice program. This ship-based learning expedition to the Arctic brought together 70 international youth and 30 educators, artists, and scientists. The program teaches environmental leadership by exploring polar-related social, cultural, and environmental issues.
- Sponsored a tour of an innovative Labrador-themed play based on the children's book *Borrowed Black – A Labrador Fantasy* by Ellen Bryan Obed. The play was staged as a shadow puppet show and included original live music and an elaborate set. The show travelled to schools in Labrador's north coast communities, as well as Happy Valley-Goose Bay.

Commitment

- Spent more than \$50 million to date on exploration programs and environmental baseline studies; approximately \$25 million stayed in the Labrador economy.

Drilling at the Jacques Lake site, July 2007

- In 2007, employed 275 people, of which 112 were from north coast communities and Happy Valley-Goose Bay area.
- Provided environmental monitor training programs for independent oversight of drill activities. Also provided the following training: Drillers helpers, First Aid, Geotechnicians, cooking, and food and kitchen safety.
- Established a procurement policy where goods and services are sourced locally whenever possible. Examples of Labrador vendors include Postmill Lumber, Provincial Airlines, Air Labrador, Innu Mikun Airlines, Sikumiut Environmental Management Ltd., Minaskuat, Universal Helicopters, and the Woodward Group.

Tours

- Provides annual tours of Aurora's site to demonstrate that uranium exploration is being carried out safely, using the proper environmental protection measures. Visitors to site include Assembly members, AngajukKâks, town councillors, uranium committee members, elders, and high school students from nearby communities of Postville and Makkovik.
- Conducted career mentoring to Inspiring Young Women in Postville and provided tours of Michelin site.
- Visits for 12 officials from Nain, Hopedale, Rigolet, Makkovik, and the Nunatsiavut Government to view an active uranium mine (McClellan Lake) and a reclaimed uranium mine (Cluff Lake) in Saskatchewan. Visitors also met with members of the nearby communities

to speak about the experience of living next to a uranium mining operation, as well as some of the benefits associated with it.

Visitors from Postville tour one of Aurora's drilling sites, Summer 2007.
